Get to know each other by answering the following questions!

What is your name?
Where are you located?
If someone visited your region, what food would you serve them?

1. Which of the following statements about Wikipedia is **unknown**?

   - The reduction of mobility during COVID increased the volume of people seeking information on Wikipedia. However, once mobility returned to normal, the volume also returned to normal, but the kind of information people looked for did not.
   - Contributions from Tor users that slip through detection are similar to contributions from unregistered and new editors.
   - We can reliably identify the gender of registered Wiki users based on profile information.

---

**Wikimania Trivia Game**

You will be shown three statements about Wikipedia: two statements will be "**knowns**" (things that people have found out about Wikipedia through research) and one statement will be an "**unknown**" (things that we do not know, things that we do not yet know, and open questions). Your objective is to work with your group to **guess which of the three statements is the "unknown."

Requiring account registration to edit Wikia wikis reduced both the number of low-quality edits and the number of high quality edits, causing an overall decrease in quality, across 136 communities.

Wikipedia editors who spend more time monitoring Wikipedia for damaging content feel more emotionally drained but also more positive about their contributions compared to those who do less monitoring work.

Data scientists have created a single reliable measure of information inequality on Wikipedia that works across languages and cultures. This measure can be used to monitor and improve how well Wiki Projects represent the world's knowledge.

While female music artists are underrepresented in the music industry, males are underrepresented on Wikipedia.

As of 2021, the Wikimedia movement has found effective ways to increase the retention of editors from Asia, Africa, and Latin America year on year.

Edit-a-thon organizers have motivations beyond closing gaps in Wikipedia. For example, they also hope Edit-a-thons can build information literacy and foster community outside of Wikipedia.

Over the last decade, the coverage gap on Wikipedia between Europe and Africa, has reduced by roughly five times.

While volunteer contributions to Wikipedia increased during COVID-19, larger Wikipedias grew more than small Wikipedias, which largely stayed at the same levels of participation.

Financial support intended to incentivize contribution to Wikipedia does not lead to active participation across all Wikipedias.
5. Which of the following statements about Wikipedia is **unknown**?

- Sociocultural norms impact Indian women's ability to contribute to Wikipedia in ways that have not been identified in other language Wikipedias.
- A person's biography is more likely to be available in languages common to the person's nationality, ethnicity, and background.
- Recommender algorithms that suggest priorities to editors based on WikiData, are an effective way to fill knowledge gaps across Wikipedia.

6. Which of the following statements about Wikipedia is **unknown**?

- Biography pages of transgender women and non-binary people tend to be longer and available in more languages than comparison articles, indicating a possible glass ceiling effect in which there is a higher bar for transgender women and non-binary people to have a Wikipedia article.
- Wikipedia is used to satisfy a variety of motivations, from looking up a topic that was referenced in media or conversation to wanting to learn something, with no dominant individual motivation.
- Edit-a-thon organizers across language Wikipedias have motivations beyond closing gaps in Wikipedia. For example, they also hope Edit-a-thons can build information literacy and foster community outside of Wikipedia.

7. Which of the following statements about Wikipedia is **unknown**?

- Globally, women are underrepresented as readers of Wikipedia.
  - On the weekends and late at night, Wikipedia readers are more likely to be led to Wikipedia by media coverage; on Fridays and Saturdays, they are more likely led by conversations.
- Data on behavior from Wikipedia can provide a reliable, indicator across languages of conflict and edit wars, including conflicts between bots.
Biographies about women who meet Wikipedia’s criteria for inclusion are more frequently considered non-notable and nominated for deletion compared to men’s biographies.

Newcomers feelings of empowerment have increased since 2019. Especially among women and newcomers in East Asia.

Wikipedians and social scientists have found reliable ways to increase the visibility of notable women in Google results and the Wikipedia's link structure by adding new biographies.

Most reported harassment on Wikipedia is perpetuated by multiple people over time (vs harassment perpetuated by one person once).

Most Wikipedia use among urban and rural users is similar.

Most Wikidata items propagate to only a few language editions.

There is a link between users’ circumstances and how they use Wikipedia. For example, people who use Wikipedia for work or school tend to access articles directly and spend more time reading, while those satisfying boredom use internal links and spend less time reading.

Recommender algorithms that suggest priorities to editors based on WikiData, are an effective way to fill knowledge gaps across Wikipedia.

Adding a trust meter to Wikipedia pages influences to trust individual articles in ways that match their actual reliability— lower trust for unreliable articles and higher trust for reliable ones.
